Spectacular major project

The majority of the works took place at great heights, atop a vertical concrete wall up to 80m high. Four angular retaining walls around 10m high were constructed along a 280m long section to the mountain side. On 27 November 2015, the lifeline of Muotathal was at last freely traversable, and in June 2016 the project was completed.

Impressions

Image notes

1

Crane above the Muota ravine.

The core of the Muotathalerstrasse finishing works consisted of the section around the Gibelhorn.

2

Muotathalerstrasse Gibelhorn

Projecting concrete plate on concrete ribs in the cliff wall

Construction work with a thrill.

In places the landscape dropped away vertically some 80 metres into the Muota ravine.
